What is GaN?

GaN adapters are a new type of power adapter that have many advantages compared to conventional, silicon-based adapters. GaN stands for Gallium Nitride, a material with a higher power density and efficiency. The use of GaN enables smaller power adapters that can also handle higher voltages and currents and even produce less heat.

This makes our power adapters with **GaN** technology **smaller, faster** and above all, more **energy efficient**.
